£324,469 of £394,650 invested could be opened up. The rest sits behind instruments that publish nothing useful, or that have no corporate underlyings at all.

86.4%

WHAT THIS CHANGES

You hold **18** lines. Once every fund is opened up you actually own **28** distinct companies — and **19** of them arrive by more than one route.

Largest underlying companies

Show all 28

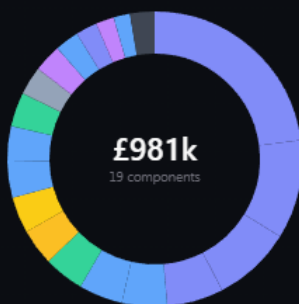

Combined exposure across every route — direct holdings and fund positions together

NVDA	NVIDIA Corp	DIRECT	×5	CSP1 · VWRP · EQQQ · Direct · SMT	8.08%

• SMT	2.4%	• BRK.B	2.0%
• ARM	1.8%		

Portfolio type

What the shape of the book says about how it is actually run

ETF	43.6%	£416k
Stock	40.3%	£385k
Fund	6.4%	£60.8k
Commodity	1.1%	£38.9k
Bond	1.2%	£30.5k
Trust	1.4%	£23.3k

- **Core-satellite.** 50% sits in pooled vehicles and 40% in individual companies. That is a core-satellite structure — the funds set the return, the single names set the dispersion.
- **Defensive sleeve.** 7% in bonds and physical commodity. This is the part that decides whether a 30% equity drawdown is survivable without selling.
- **Cash drag.** 2.7% uninvested. Below 3% is operational; above 8% is an unmade decision.

Scorecard

Each axis is the value-weighted average across every holding. Per-axis detail shows which lines are lifting or dragging it, weighted by actual pull rather than raw score.

FAIR

Correlation

Daily returns over the overlapping window. Average pairwise correlation across the book is 0.24.

Portfolio Scorecard ①

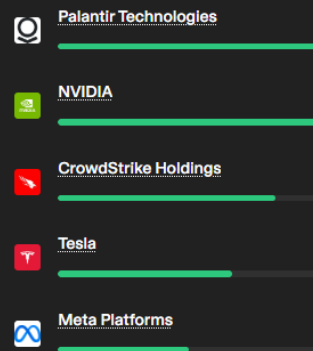

Your portfolio scored out of 6 on five measures at once. A larger, more even shape means stronger, better balanced holdings. Select a point to see which holdings lift that score and which hold it back.

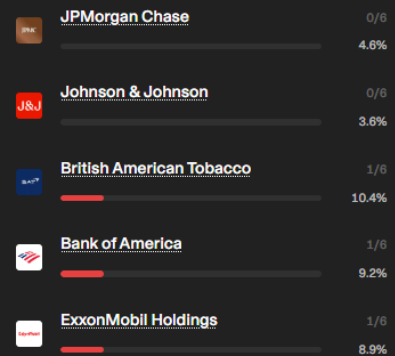

Future 2.64 / 6

Expected earnings and revenue growth across your holdings.

LIFTING THE SCORE

HOLDING IT BACK

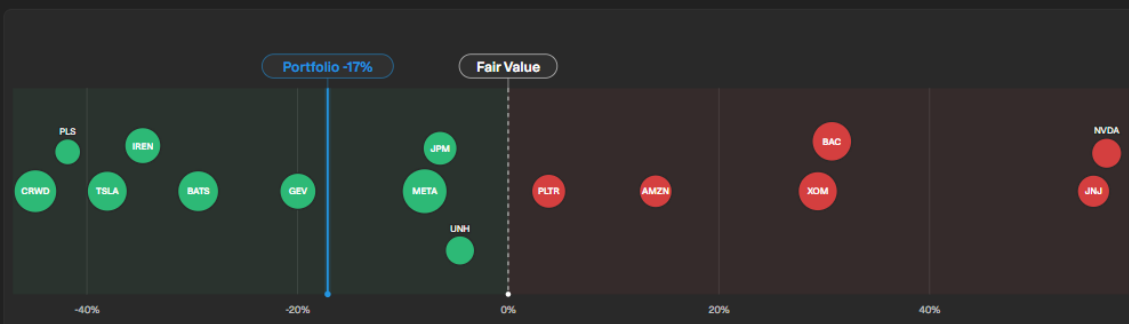

Valuation

Fair Value DCF PE PS PB

Narrative Fair Value ①

How far above or below its narrative fair value each holding trades.

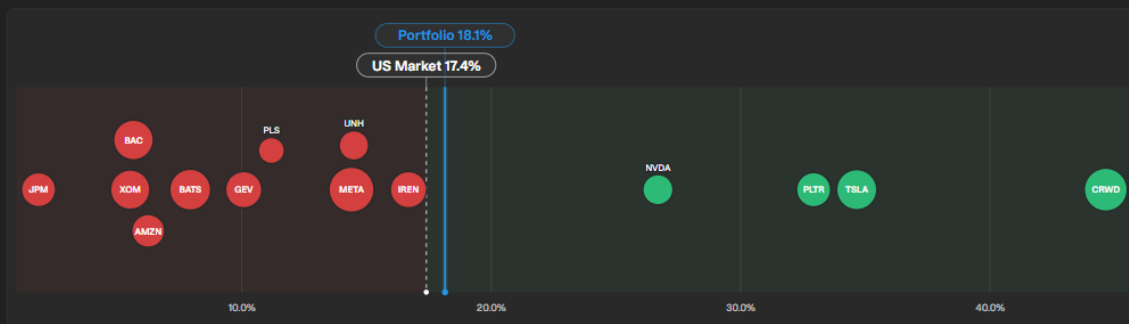

Future growth

Earnings Revenue EPS

Forecast Earnings Growth ①

How fast analysts expect each holding's earnings to grow, against the market.

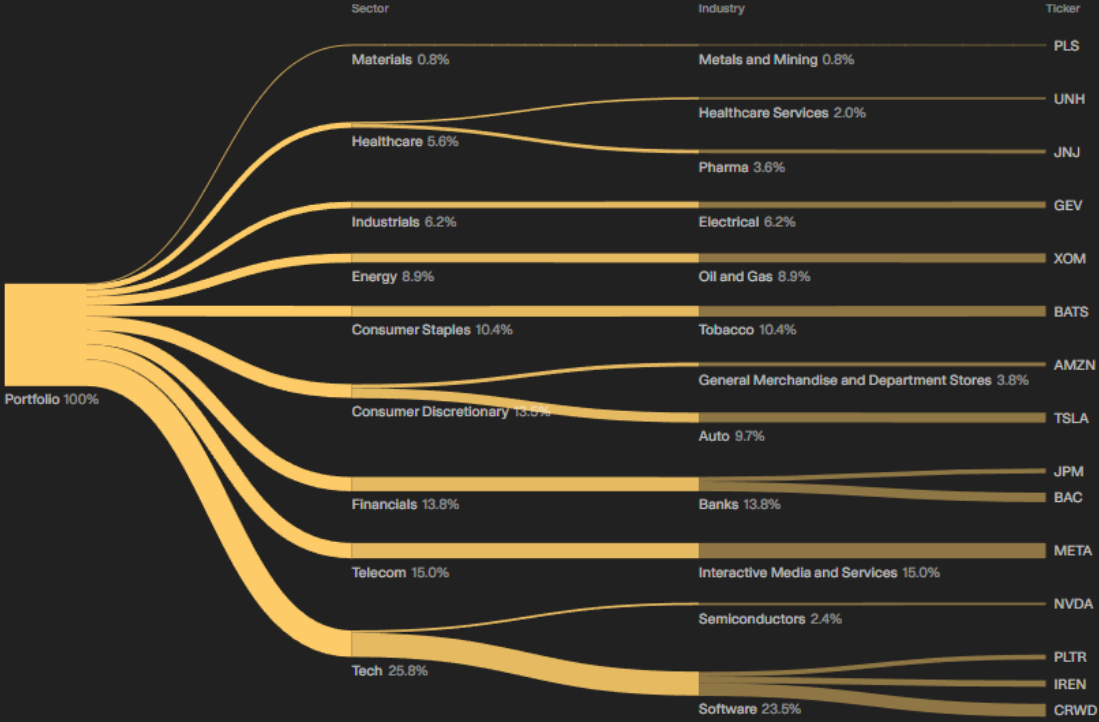

1 holding does not have a value for this metric.

Diversification

How your portfolio is spread across industries, holdings and regions.

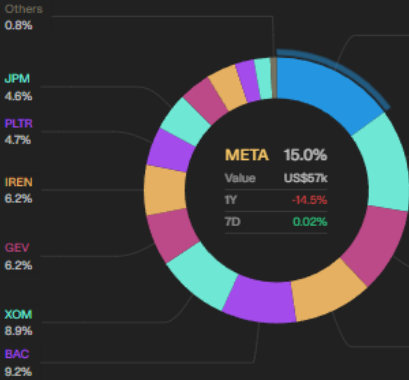

Diversification Across Industries ①

Which sectors and industries your money sits in, by weight.

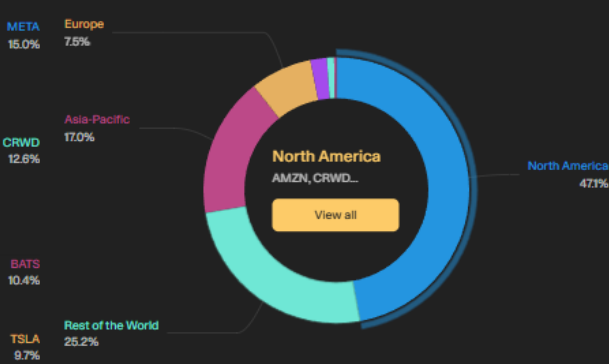

Diversification Across Holdings ①

How much of your portfolio each holding represents.

Revenue Diversification by Geography ①

Where your holdings actually earn their revenue.

Correlation

Whether that spread actually works, or your holdings rise and fall together.

Moves Together

The pairings doing least to spread your risk.

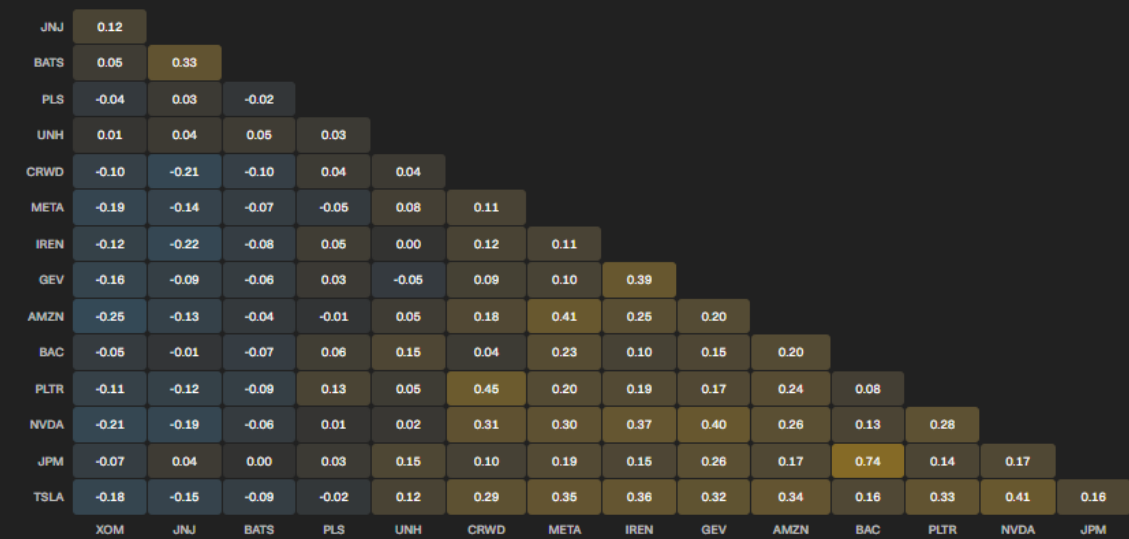

Moves Least Together

The pairings doing most to spread your risk.

Correlation Matrix

Every pair of holdings, shaded by how closely the two have moved together.

Hover a cell to compare two holdings.

Move oppositely Move together

The middle of the scale is 0, where two holdings move independently of each other.

THE LETTER · WEEK 38

A quiet week, lifted by chips.

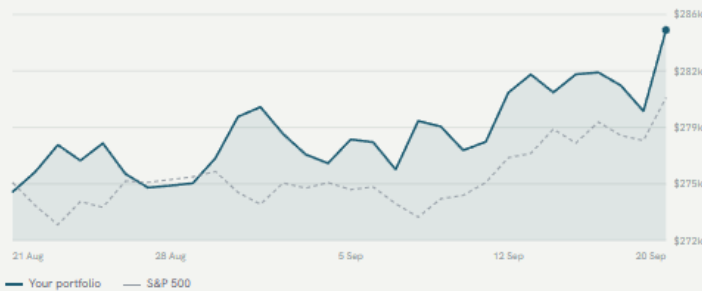

Your portfolio gained \$1,760 over the week. Most of it came from three names – and one of your positions is starting to look like a problem worth understanding.

Prepared from 12 positions across 3 accounts · 6 minute read

\$284,920.⁴⁸

▲ 0.62% today All-time +\$41,868 (+17.2%) Cash \$14,246

1M 3M 6M 1Y ALL

Switch to 3M to see the annotated moments.

Technology did the heavy lifting. **NVIDIA** rose 2.3% on the day and **Microsoft** added 1.1%, together contributing more than half of the week's gain. Elsewhere, **Bitcoin** slipped 1.4% – a reminder that the 5.5% you hold there is the most volatile part of the book.

“You own more technology than it looks: 30.4%, not 22.0%.”

That figure comes from looking through your funds. **VTI** and **VXUS** both carry meaningful weight in the same handful of companies you already hold directly, so the true exposure is roughly eight points higher than the holdings list suggests.

Meanwhile, US equity has drifted seven and a half points above the 50% you set as a target, and **your bonds** now sit six points under theirs. Nothing here is urgent. But left alone, the drift only widens in a rising market – which is precisely when it is hardest to act on.

WORTH YOUR ATTENTION

DRIFT US equity is 7.5 points over target. A rebalance would trim about \$21,400.

CAP Bitcoin is 0.5 points over the 5% cap you set for it.
